milk.

providing a transgenic female non-human mammal carrying in its germline heterologous DNA segments encoding $A\alpha$, $B\beta$ and γ chains of fibrinogen, wherein said segments are expressed in a mammary gland of said mammal and <u>biocompetent</u> fibrinogen encoded by said segments is secreted into milk of said mammal;

> collecting milk from said mammal; and recovering said biocompetent fibrinogen from said

- 19. (amended) A transgenic non-human female mammal that produces recoverable amounts of biocompetent human fibrinogen in its milk.
- 20. (amended) A process for producing transgenic offspring of a mammal comprising:

providing a finst DNA segment encoding fibrinogen Aα chain, a second DNA segment encoding fibrinogen $B\beta$ chain, and a $\backslash \text{third}$ DNA segment encoding a fibrinogen γ chain, wherein each of said first, second and segments is operably\ linked to additional segments required for its expression in a mammary gland of a host female mammal and secretion into milk of said host female mammal:

introducing said DNA \segments into a fertilized egg of a mammal of a non-human species;

inserting said egg into an oviduct or uterus of a female of said non-human species to obtain an offspring carrying said first, second and third DNA segments, wherein female progeny of said mammal express said DNA segments in a mammary gland to produce biocompetent fibrinogen.

Please add the following new claims:

-- 20. A method according to claim 1 wherein said species is sheep.
